From A GUIDE TO CHICAGO'S HISTORIC SUBURBS

“This clapboard Italianate house on a limestone foundation was built about 1870. IT contains all of the distinctive characteristics of the style in excellent repair. It has scroll-cut cornices, incised with stars and containing knobbed pendants with the panels between the brackets in the cornice an dentils above. The generous window frames have both feet and shoulders. A segmental cornice, above, has slightly rounded corner boards. On the wing projecting south, on the ground floor, is a polygonal bay. The slightly lower service wing that projects to the east has the original metal roof, although it is now covered with tar. Added sometime in the second decade of the twentieth century was the porch set across the west and south facades. It has cast concrete columns. These are in the Tuscan order with flutes and egg and leaf molding in the echinus, a distinctive form of the order that derived from Renaissance pattern books popular during this period. The use of cast concrete for such an element is an important factor in the development of early twentieth-century building technology.”
