

Downtown Washington Street Bridge Replacement

Sidewalk Considerations

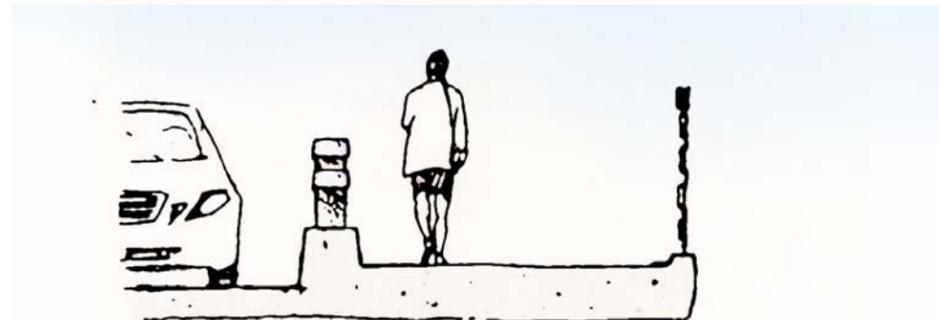

There are several options for sidewalk across the bridge. At least one solid barrier is required across the structure. Additional barriers and the width of the walkway will be determined during the design phase.

- No barrier between traffic and pedestrians.
- Matches existing conditions

- Non-solid barrier (fence) between traffic and pedestrians

- Solid barrier between traffic and pedestrians
- Similar to Eagle/Main Street
- May require guardrail at terminal ends

* Additional aesthetic options can be viewed on board 10.
